8. (Amended) A device for mounting a monitoring package on a tire surface, comprising:

a planar patch having a first surface conditioned for bonding to an inner liner of a tire and second surface oppositely disposed;

a block disposed on the second surface and upstanding therefrom, the block having two opposing outer sides which mutually diverge to define an engaging contour; and,

a package for containing tire monitoring devices, the package having a channel with a complementary contour for slidable engagement with the engaging contour.
